December 2021

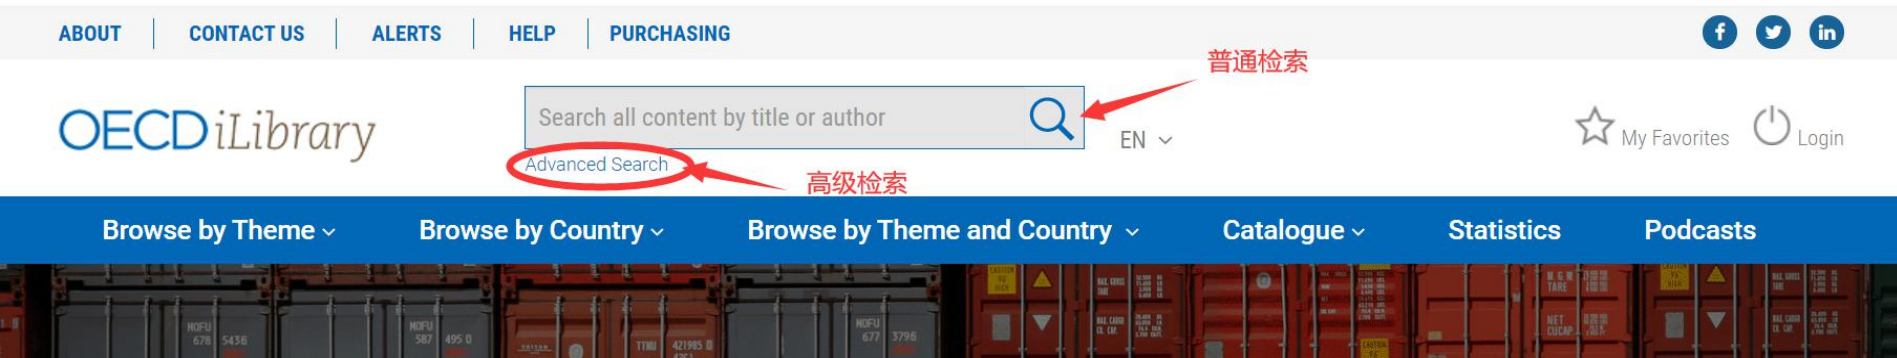

OECD Economic Outlook, Volume 2021 Issue 2 - Preliminary version

The global recovery from the COVID-19 pandemic is uneven and becoming imbalanced. The newest edition highlights the continued benefits of vaccinations and strong policy support for the global economy, but also points to the risks and policy challenges arising from supply constraints and rising inflation pressures.

OECD Policy Responses to Coronavirus (COVID-19)
(Working Paper Series, English)
OECD

This series compiles data, analysis and recommendations on a range of topics to address the health, economic and societal crisis, facilitate co-ordination, and contribute to the necessary global action when confronting this enormous collective challenge. Bringing together policy responses spanning a large range of topics, from health to education and taxes, it provides guidance on the short-term measures in affected sectors and a specific focus on the vulnerable sectors of society and the economy. The content also aims to provide analysis on the longer-term consequences and impacts, steering the way towards a strong, resilient, green and inclusive recovery with co-ordinated policy responses across countries.
